***Thank you for your
patience during the 2017
Construction Phase***

SR 89/Fanny Bridge Community Revitalization Project 2017 Accomplishments:

- The new rockery wall is completed. (located along SR 89 across from the Caltrans Yard coming into Tahoe City from Truckee)
- The new entry to the Tahoe City Transit Center is finished. Paving is scheduled for spring 2018.
- The new State Route 89 alignment is cleared. Paving is scheduled for spring 2018.
- New Truckee River Bridge abutments are in place.
- The Tahoe City "Wye" is cleared of trees.
- The Williamson Tree will be relocated in spring 2018 to the area above the new rockery wall.

Rockery wall on SR 89 across from the Caltrans Maintenance Yard. The Williamson Tree will be relocated above the rockery wall.

New entrance to the Tahoe City Transit Center along West Lake Blvd.

Location for the new Truckee River Bridge east of the Caltrans Maintenance Yard.

About the Project

On May 27, 2015, the Tahoe Regional Planning Agency Governing Board unanimously approved Preferred Alternative 1, Option 2, concurring with the Placer County Board of Supervisors and the TTD Board of Directors positive votes.

The TTD has been the lead agency for the project for over six years and will be through the project's completion. Central Federal Lands has assumed the role as lead agency for construction and design of the project and on October 3, 2016 awarded the construction contract to Martin Brothers Construction.

Project

The final project design reflects input from Tahoe City business and property owners, stakeholders, various agencies and residents.

Project goals include:

- Improve pedestrian and cyclists' safety
- Alleviate traffic congestion to improve transit travel times and user experiences
- Provide two safety routes from the west shore
- Make the "wye" area more inviting for shopping and dining
- Add complete street enhancements to the portion of "old SR89/West Lake Blvd. that will become a local road
- Encourage economic development and revitalizing the community
- Rebuild 88 year-old Fanny Bridge with sidewalks on both sides
- Improve reliability and connectivity with the new transit center
- Lessen emissions by a reduction in vehicles idling in traffic and sediment run-off from graded storm water treatment
